Team ID	SWTID-2026-8642
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • I need to import data from a spreadsheet into ServiceNow. • The data should be mapped correctly using Transform Maps. • I don't want to do this process manually every time.		**THINKS** • Will the spreadsheet columns match the ServiceNow fields? • What if the data is not mapped correctly? • Will there be any errors during import?
	PERSONA NAME *(Role:ServiceNow User)* *(e.g:Admin / Data Manager)*	
DOES • Prepares the data in a spreadsheet. • Uses Import Sets do upload the data. • Configures Transform Maps to map fields.		**FEELS** • Confident when the data is imported successfully. • Stressed or worried when there are errors. • Frustrated if the mapping is incorrect.
