Customer Journey Map

Date	29 September 2026
Team ID	SWTID-2026-8642
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	**Stage 1** Data Preparation & Upload	**Stage 2** Mapping & Execution	**Stage 3** Verification & Error Handling
Actions *What does the customer do?*	• Prepares and cleans source spreadsheet data. • Logs into the system and navigates to the Import Set module. • Uploads the spreadsheet file to create an import set.	• Creates or selects the appropriate Transform Map. • Maps source columns from the spreadsheet to target table fields. • Executes the transform process to load data.	• Reviews the import set logs and transform status. • Verifies imported records in the target table. • Fixes rejected or failed rows and re-transforms if needed.

Touchpoint *What part of the service do they interact with?*	• Spreadsheet Application (Excel/CSV) • Data Import Module / Upload Interface • Import Set Table	• Transform Map Form • Auto-Map / Field Map Configuration Tool • Transform Execution Button	• Import Set Logs & Error Reports • Target Data Table View • System Notifications / Exception Manager
Customer Thought *What is the customer thinking?*	• *"Is my spreadsheet formatted correctly and clean?"* • *"Will the file upload smoothly without file size or delimiter issues?"* • *"Did all rows parse correctly into the import set?"*	• *"Are all spreadsheet columns accurately mapped to target fields?"* • *"Should I use scripts or coalescing for unique records?"* • *"Will this transform overwrite existing data?"*	• *"Did all data import successfully without errors?"* • *"Why were certain records rejected or skipped?"* • *"Is the target database displaying accurate information now?"*
Customer Feeling *What is the customer feeling?*	• Concerned about formatting errors or invalid data before uploading. • Tired from manually cleaning large Excel files. • Satisfied when the file uploads cleanly into the Import Set.	• Unsure about mapping complex or mismatched source columns. • Fearful of accidentally overwriting or corrupting existing records. • Expecting the automated mapping rules to run seamlessly.	• Annoyed when transform errors or rejected rows occur. • Pleased upon seeing all target table records updated correctly. • Trusting the system's data ingestion process for future loads.

Process Ownership *Who is in the lead on this?*	• **Data Owner / Data Analyst:** Prepares and validates raw source data. • **Business User:** Initiates and manages the spreadsheet file upload. • **System Administrator:** Manages storage limits and upload permissions.	• **System Administrator:** Configures transform maps and mapping rules. • **Integration Developer:** Handles custom scripting and coalesce logic. • **Database Administrator:** Oversees target table schema and architecture.	• **Quality Assurance (QA) Team:** Validates data accuracy in the target table. • **Data Governance Team:** Ensures compliance and data integrity standards. • **Operations Support:** Troubleshoots logs and re-runs failed transform jobs.
Opportunities *How can we improve this stage?*	• **Automated Pre-Validation:** Add automated column header and data type checks before upload. • **Drag-and-Drop Interface:** Implement a modern drag-and-drop UI with progress bars. • **Smart Templates:** Provide downloadable pre-formatted Excel templates for standard imports.	• **AI-Powered Mapping:** Use AI to automatically suggest field mappings based on header names. • **Dry-Run / Preview:** Add a preview mode to test transformations on sample data before executing. • **Duplicate Warnings:** Display smart alerts when potential duplicates are detected during mapping.	• **Interactive Error Dashboard:** Build an in-app error grid where users can edit failed rows directly. • **One-Click Retry:** Allow users to re-run only the failed records without uploading the entire file again. • **Automated Email Reports:** Send instant email notifications with import summaries and error logs.
