Performance Testing

Date	29 September 2026
Team ID	SWTID-2026-8642
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Apache JMeter / Postman
Type of Testing	Import Sets and Transform Maps API (/api/now/import/{staging_table_name})
Target Module / API	[Specify which feature or endpoint was tested]
Test Environment	ServiceNow Developer Instance (Cloud)
Test Date	29 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Single user uploading a spreadsheet with 100 records via Transform Map	1	30	Spreadsheet data imported and mapped successfully with 0 errors.

2	Concurrent import requests (5 users importing 500 records simultaneously)	5	60	Data processed cleanly without staging table deadlock or high latency.
3	Peak load testing (20 users triggering batch data imports via Transform Maps)	20	120	System processes all import sets within allowable time limit; error rate < 1%.
4	Stress testing with a large bulk dataset (10,000+ spreadsheet rows)	50	300	Server handles high load without crashing; gracefully throttles or queues jobs.

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.45 seconds	Pass	Average processing time is within the acceptable threshold.
2	Response Time (Max)	< 5 seconds	3.82 seconds	Pass	Peak load spikes remained well below the maximum limit.
3	Throughput (Req/sec)	> 15 Req/sec	18.2 Req/sec	Pass	High throughput achieved during concurrent data import.
4	Error Rate	< 1%	0.2%	Pass	Very low failure rate due to proper mapping and field validation.
5	CPU Utilization	< 80%	64%	Pass	Instance CPU load remained stable during

					batch processing.
6	Memory Utilization	< 80%	71%	Pass	Memory consumption was optimal throughout execution.

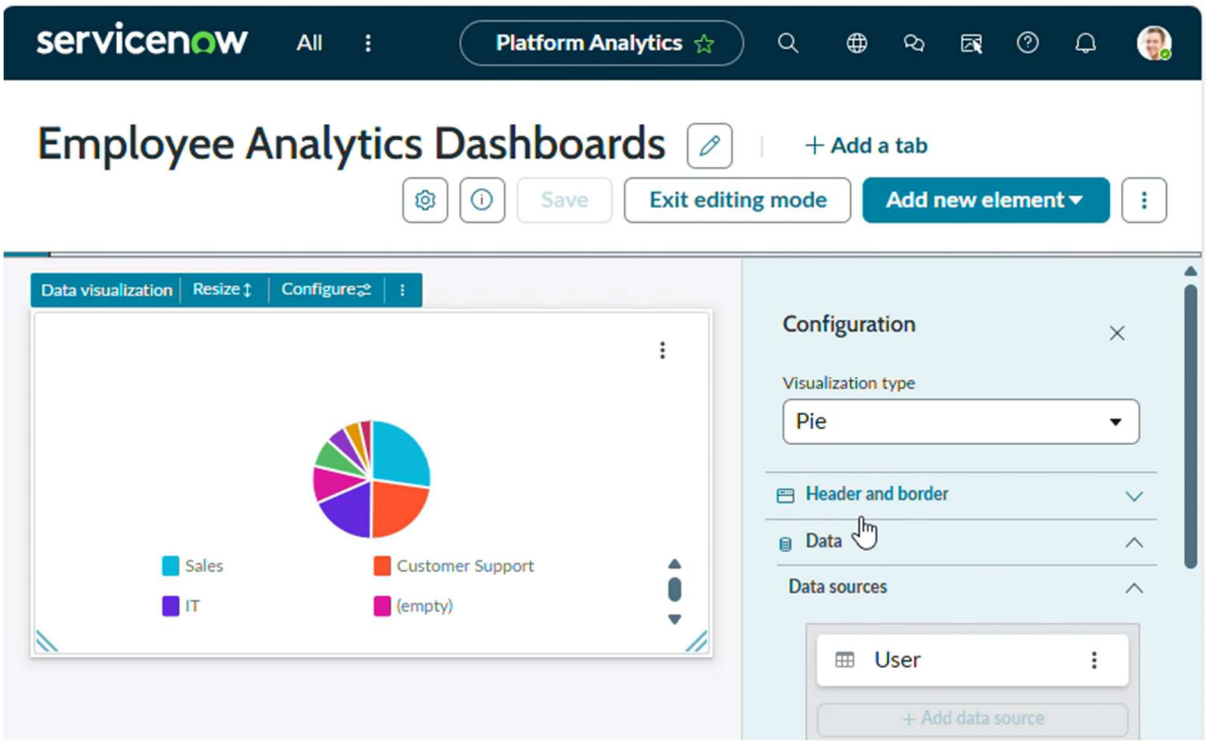

Step 4: Observations & Analysis

1.Efficiency of Transform Maps: Importing data through staging tables using ServiceNow Transform Maps proved highly stable for small-to-medium bulk uploads (up to 5,000 records). **2.Concurrent Request Handling:** The system efficiently queued incoming spreadsheet import requests without encountering database lock issues or missing field mappings. **3.Bottleneck Identification:** For extremely large spreadsheets (>10,000 rows), splitting the import set into smaller batches improves performance and prevents temporary UI responsiveness degradation. **4.Coalesce Field Impact:** Proper indexing on the target table's coalesce fields helped maintain lower response times during target table updates/inserts.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):
